

Take the Complexity and Guesswork out of Oracle Payroll with Orasys Payroll Datastore

Utilizing our payroll datastore will enable your developers to provide your payroll end-users with answers to difficult payroll balance questions quickly and easily. Your developers will no longer have to struggle with Oracle API calls for taxes or regular payroll balances. Simple queries will provide the answers to commonly asked payroll questions. What used to take days to produce can now be generated in a fraction of the time.

What are the benefits of using our datastore?

- Speed and accuracy of the data
- Quick simple queries to provide basic balance information
- Developers no longer have to know Oracle API calls in order to produce quick and accurate results
 - No need to understand setting contexts prior to executing queries such as dimensions or jurisdiction codes
- Save time and money on outbound payroll interface development
- Allow your payroll department and IT team to respond quickly to issues by having faster and more accurate access to critical payroll data
- Make current complex payroll reports/interfaces more supportable by substituting complex API calls with simple SQL queries
